Sale interfaced by:

Buy and Sell stock nationally

We welcome you to our online Traditional Female Dispersal & Bull Sale.

The dispersal of our traditional cows has been one of the toughest decisions we have had to make. After back-to-back seasons of well below average rainfall, with a third on the cards and not owning our own land, we have had to make some commercial business choices which has led us to offering our “beautiful girls” up for sale.

We are super proud of our cow herd. Our breeding focus and principles have been on temperament, structure, fertility and lower birth weights, with strong growth figures.

Due to the season, we shortened our mating to 6 weeks (females due to start calving mid-February), and even under the challenging conditions we’ve been experiencing, all but 2 cows have got back in calf (please see notes in the Lots). With all mature cows sold with their 7 to 8 month-old ‘W’ calves at foot to enhance your selection opportunities.

We would love for them to continue to breed on into the future and hope you find something that will complement your own herd amongst them.

Please feel free to contact us for any further information you may require or alternatively to organise an inspection.

Follow us on Facebook for future updates! -

Facebook Page

SALE INFORMATION

Sale Date and Prior Inspection Time

Selling will commence at 1 pm, closing at 8pm (or until bidding ceases online) on Monday, October 6th. All Sale Lots can be inspected At any time by arrangement with Matt Nicolle

Selling System

Sale of animals will be conducted under the standard auction terms and conditions. All animals are sold exclusive of GST.

Each Bull & female will be sold as a separate Lot as \$per head.

Registration

All animals are registered with the Australian Simmental Breeders Association and are eligible for transfer.

DNA, Colour & Polled Testing

All Cattle have been tested for colour and polled status with the results indicated in the catalogue. They have also been 100K DNA tested, BVDV tested negative and all BT cattle are Parent verified

Scanning

Bulls will be scanned prior to sale day.

Breeding Soundness

All bulls will undergone a examination by Nationwide Artificial Breeding before the sale, including semen testing and checks for any genital abnormalities.

Joining

All females in this sale were running with the bull for 6 weeks from the 10th of May to the 21st of June. Females pretested on the 2nd of September by Bordertown Vets

HEALTH

HERD - J-BAS 6

Bulls

-7 in 1 Vaccinated
-Vibromax Vaccinated
-Pestigard Vaccinated
-Backedlined drenched

Females

-7 in 1 Vaccinated
-Pestigard Vaccinated
-Backedlined drenched

Calves

-7 in 1 Vaccinated
-Pestigard Vaccinated
-coblife b12 with selenium
-Backedlined drenched

All booster will be given on the 27th of September

Delivery

All sale cattle are the responsibility of the purchaser to arrange the transport and delivery of their purchased lots with all cost of freight incurred by the purchaser.

Rebates

A rebate of 3% will be offered to agents who introduce their clients in writing to the selling agent prior to sale day and settle on their behalf within 7 days

Agents – please note

All introductions to be made to the agent via email 24 hours prior to the sale.
laryn.gogel@elders.com.au

Videos

All lots will be videoed prior to the sale. They will be available via Auctionsplus or the BT Simmentals Facebook page.

SALE CATALOGUE DISCLAIMER

EPD Information

IGS is the world's largest animal performance recording system. One of the major changes is the breeding figures being reported as Estimate Progeny Differences (EPDs), rather than Estimated Breeding Values (EBVs). The difference between the two is simple.

Effectively, an EBV is an animal's own genetic value for a particular trait. However, the animal can only pass half of this onto their progeny. EPDs have the "half" already accounted for. That is, an EPD is the genetic merit of an animal's progeny – what they will pass onto their progeny. IGS can incorporate an animal's genomics into its performance data. All animals in this sale have been 100K GGP-LD DNA profiled.

HOW RANK % WORKS

IGS EPD's are used for direct comparisons, not just across the same breed within different countries, but across all breeds and all countries in IGS. That means that the EPD's for a Simmental bull in Australia can be directly compared to the EPD's for a Simmental bull in Canada or the EPD's for a Red Angus bull in America. Whilst the IGS EPD's can be directly compared across all IGS recorded animals, the same can not be said for percentiles. Percentile bands for Simmentals in Australia only rank each Australian Simmental against other Australian Simmental cattle. To make this process as uncomplicated as possible, we also print the EPD's with a Rank % value. The Rank % value lists the percentile rank for every EPD and every animal.

\$ INDEXES

Simmental Australia's newly developed Australian \$ Indexes will be available to be viewed alongside the other EPDs on the CGEN system. The two new Indexes, the Australian All-Purpose Index (AAPI) and the Australian Terminal Index (ATI) are specifically formulated to reflect the weighting of the economic relevant traits to the Australian farming system, given Australian production systems, input costs and payment grids.

Notes: Homo Polled and only a baby that was purchased as a calf alongside the quality matron Princess Q134. A moderate framed soggy calf with spring of rib with depth of body and natural thickness, an easy-care youngster that continues to impress as he matures.
